Robotic Lifting. Closet-Sized Convenience. Keeping Age in Place.

The SmartLift Companion is a discreet, smartphone-controlled robotic lifting device designed for homes with aging adults. Built to lift both people and objects safely, it empowers elderly individuals to live independently and caregivers to assist without injury quietly waiting in the closet until needed, just like a vacuum.

The Problem: Unsafe Lifting Risks

Falls and lifting strain are the #1 cause of injury for elderly individuals and home caregivers. Most households still rely on manual lifting or emergency services—leading to delayed care, staff injuries, family trauma, and premature institutionalization. Every moment without a lifting solution invites predictable, preventable risk.

The Desired Outcome: Age in Place

SmartLift Companion empowers seniors to remain independent while ensuring caregivers can provide support without injury. It delivers just-in-time lifting assistance for people and objects, reducing the need for emergency calls, improving staff efficiency, and elevating your organization's reputation for safe, modern care.

Why It Matters—Now

Every home without this device faces operational, emotional, and legal vulnerabilities. Clients want to age in place. Staff need protection. You need a solution that improves safety and reduces liability before the next fall forces a crisis.

SmartLift Companion isn't a luxury, it's a non-negotiable upgrade for homes supporting elderly residents. It helps you modernize care, minimize risk, and maximize peace of mind.

Let's Make Homes Safer for Aging in Place

SmartLift Companion is a must-have assistive technology for the modern aging-in-place household. It keeps elderly people safer, caregivers supported, and homes better prepared.
